

1. Set-up pop-up frame and ensure a power supply is available.

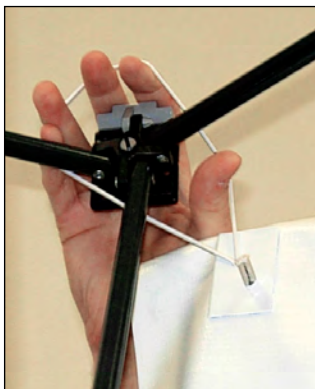

2. Unroll the back light panels

3. Hang panel (see note 1).

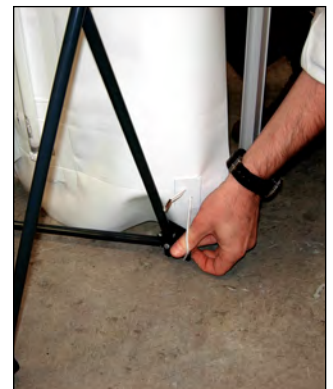

- 4a. Attach each top corner of panel to top of frame using the universal attachment provided (elastic).

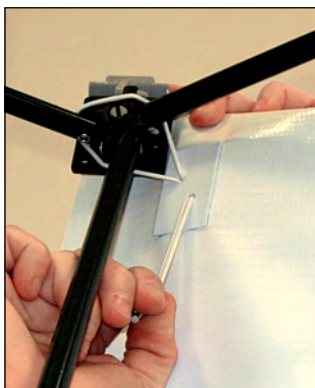

- 4b. Attach the center of back light panel to the frame.

- 4c. Attach bottom corners of the back light panel to frame.

- 4d. Pull elastic to tighten if needed (see note 2).

5. Repeat these steps for the other panels.

6. Place graphics on front. Plug it in and light it up!

NOTES: 1. Attaching to frame:
Pop-up types may vary depending on manufacturer. Should longer elastics be needed, please attach additional elastics to those already on panels or use tie wraps.

2. Elastic replacement:
Under certain conditions or over time the industrial elastics used for the universal attachment of the back light panels to the pop-up frame can break. For your convenience, we have supplied extra elastics with all shipments. To repair elastics, please thread the elastic through the holes of old elastic. It is always recommended to wear safety glasses when applying pressure to elastics.
